

PREFACE

This manual has been produced as part of a set of Construction Documentation which has been designed to assist developers, consultants, contractors, design staff and inspectors in meeting SA Water's infrastructure requirements and are based on Best Engineering Practice which should ensure a minimum life of at least 80-100 years.

The full set of documents consists of:-

Sewer Construction Document Folder

- SA Water Specifications necessary to manage Sub-division and short extension Contracts.
- 'Authorized Items for Sewer Systems' Catalogue.

Sewer Construction Drawings (this Document)

- Contains the Drawings necessary for contractors to meet SA Water construction requirements.

These documents are now available on the Internet in PDF format for easy downloading and printing. It is recommended that users maintain a hard copy version of those sections they commonly use, but access the electronic version for the less frequently used areas.

The site can be found at

<http://www.sawater.com.au/SAWater/DevelopersBuilders/NetworkInfrastructureStandards/Sewer+Manual.htm>

This ensures access to the latest information at all times and meets the QA requirements of AS/NZS-ISO 9000.

The management of these documents is the responsibility of the Infrastructure Standards Manager and all correspondence regarding changes, improvements or modifications should be directed to Infrastructure Standards.
