

Fabrication

What we can offer your business

The Fabrication Workshop specialises in manufacturing steel, stainless steel and aluminium structures to the highest standard. Our tradespeople are experienced in fabricating mild steel cement mortar lined MSCL pipes which can be used for pipeline systems, pump stations, wastewater and water treatment plants and irrigation systems. We also offer high level technical expertise and a 24-hour service.

Benefits of our pipes

A notable benefit of our pipes is their cost effectiveness over a long life and their versatility to be used above or below ground. Our services extend to our ability to roll our own pipes, tapers and fittings for a range of sizes up to 1800mm in diameter.

Fabrication Workshop

Our new facility provides an extensive range of up-to-date equipment which ensures all repairs and manufacturing is conducted to a very high standard. The Fabrication Workshop also features two gantry lifting cranes and over 900 square metres of workspace.
